React Notifications

Installation

```
npm install --save react-notifications
```

Usage

Note

Use only one 'NotificationContainer' component in the app.

CSS

Webpack:

```
import 'react-notifications/lib/notifications.css';
```

Other

```
<link rel="stylesheet" type="text/css" href="path/to/notifications.css">
```

JS

```
import React from 'react';
import {NotificationContainer, NotificationManager} from 'react-notifications';

class Example extends React.Component {
  createNotification = (type) => {
    return () => {
      switch (type) {
        case 'info':
          NotificationManager.info('Info message');
          break;
        case 'success':
          NotificationManager.success('Success message', 'Title here');
          break;
        case 'warning':
          NotificationManager.warning('Warning message', 'Close after 3000ms', 3000);
          break;
        case 'error':
          NotificationManager.error('Error message', 'Click me!', 5000, () => {
            alert('callback');
          });
          break;
      }
    };
  };
};

render() {
  return (
    <div>
      <button className='btn btn-info'
        onClick={this.createNotification('info')}>Info
      </button>
      <hr/>
      <button className='btn btn-success'
        onClick={this.createNotification('success')}>Success
      </button>
      <hr/>
      <button className='btn btn-warning'
        onClick={this.createNotification('warning')}>Warning
      </button>
      <hr/>
      <button className='btn btn-danger'
        onClick={this.createNotification('error')}>Error
      </button>

      <NotificationContainer/>
    </div>
  );
}
```

```
export default Example;
```

UMD

```
<link rel="stylesheet" type="text/css" href="path/to/react-notifications/dist/react-notificati
<script src="path/to/react-notifications/dist/react-notifications.js"></script>
```

```
const NotificationContainer = window.ReactNotifications.NotificationContainer;
const NotificationManager = window.ReactNotifications.NotificationManager;
```

NotificationContainer Props

Name	Type	Default	Required
enterTimeout	number	400	false
leaveTimeout	number	400	false

NotificationManager API

- NotificationManager.info(message, title, timeOut, callback, priority);
- NotificationManager.success(message, title, timeOut, callback, priority);
- NotificationManager.warning(message, title, timeOut, callback, priority);
- NotificationManager.error(message, title, timeOut, callback, priority);

Name	Type	Description
message	string	The message string
title	string	The title string
timeOut	integer	The popup timeout in milliseconds
callback	function	A function that gets fired when the popup is clicked
priority	boolean	If true, the message gets inserted at the top

Example

View [demo](#) or example folder.

Contributing

When contributing to this repository, please first open an issue and discuss intended changes with maintainers. If there is already an issue open for the feature you are looking to develop, please just coordinate with maintainers before assigning issue to yourself.

Branches

`master` is the main branch from which we publish packages. `next` is the branch from which we will publish the next release. All `issue` branches should be branched from `master` , unless specifically told by the maintainers to use a different branch. All pull requests should be submitted to merge with `next` in order to make the next release.

Workflow

- Fork repo
- Create an issue branch

- Commit your changes
- Open a PR against `next` .
- Link the Issue to your PR.

Pull Request Guidelines

- PRs should be submitted to merge with `next` .
- PRs should be small in scope, work on 1 issue in a single PR.
- Link the Issue you are working to your PR.

You can add as many commits to your PR as you would like. All commits will be squashed into a single commit when merging PR.

Keywords

react-component react component notifications notification

Install

```
> npm i react-notifications
```
